

## SMP deliver results at Pluto LNG

Woodside's Pluto LNG Project is one of Australia's largest resource projects. The project, which was approved for development in July 2007, will process gas from the Pluto and Xena gas fields into LNG and condensate with first LNG targeted for end of March 2011.

*"The SMP project crew mobilised to assist us in key critical path work areas and supported the QC and Completions documentation towards Mechanical Completion and handover to our client. Their team performed well, met our site safety expectations and I would have no hesitation in recommending SMP for similar works", commented Tim Webster – AGC Ausgroup Project Manager*

SMP provided a crew of 48 including superintendent, senior engineer, QA engineer and supervisor.

### Project Key Facts

**Project Owner**

Woodside

**Project**

Pluto LNG

**Client**

AGC Ausgroup

**Value**

~ \$70M AUD

**SMP Scope**

Execution Crew of 48

### Scope of Work

SMP Engineering was engaged by AGC Ausgroup in June 2010 to inject a self sufficient project crew complete with supervision, engineering and QA/QC to support a variety of workscopes.

### Project Outcomes

- + Incident Free
- + QA/QC Leadership
- + Oil and Gas
- + Completions team
- + Critical path
- + Specialised scopes
- + Structural, mechanical and piping
- + Engineering support

### Contact Us

Call the team at SMP Engineering for all your structural, mechanical and piping needs on 9412 8000.
