

## Tropicana Gold Mine Project

Tropicana Gold Project is located 330 km north east of Kalgoorlie and is jointly owned by AngloGold Ashanti and is targeted to produce up to 430,000 ounces of gold a year.

SMP Engineering (SMP) provided a fully supervised 45 man multidiscipline crew including Engineering support and vehicles to complete key project deliverables. These works included the installation of conveyor systems, including trusses, trestles, take-up towers and dressing out and alignment. A dedicated piping crew focused on the site installation of pre-spooled and site run carbon steel. SMP provided for the qualification and traceability of associated welding works. A crew was assigned with the structural, mechanical and piping completion of the gold room, including bolt ups to precast tilt up panels and item fit out.

### Project Key Facts

**Project Owner**

AngloGold Ashanti

**Project**

Tropicana Gold Mine

**Client**

Pacific Industrial Company (PIC)

**Value**

\$700million

**SMP Scope**

Completions and handover of key structural, mechanical and piping deliverables.

### Project Scope and Outcomes

- + Zero reportable safety incidents
- + 46 575 man hours
- + Successful integration with the client's team
