

Technical Services deliver both Consulting and Contract Services

The Technical services team is comprised of skilled professionals capable of delivering results both within Australia and overseas in China, Korea and Thailand.

Consulting services includes the supply of EPCM teams as well as delivery of specific products such as capital justification, project management and time in motion studies.

Contract services support clients with resourcing of contract professionals who work as an integrated part of client teams. This is delivered as a short or long term secondment as supplementary white collar labour hire.
